

SITTING & STANDING WORKING HEIGHT ADJUSTABLE WORKSTATION

QUICK USER GUIDE

MODEL: PDRIS06

Thanks for choosing this sit-stand height adjustable desk/workstation
Although designed to be easy-to-use, carefully reading and following this guide will help you to use this desk more easily.

- Open the box and you will find the desk is already fully assembled. You only need to place it on a table.
- The table you place it on should be wider than 29", and deeper than 26.5", as the base will occupy an area of approximately 29" by 21 5/8" in its lowest position.
- There is a "T" style locking handle on the left and right under the main desktop, put your hands on left and right then use your finger to pull out the locking pin so the angle becomes adjustable.
- Adjust the angle to the height you need and release the locking pins to make sure both pins are locked.
- When you want to **increase** the height, you need to pull the desktop up a little, and when you want to **decrease** the height, you need to press the desktop down a little.

Normally the user will only use the lowest and highest positions.

Pay attention: You **must** lock **BOTH** pins for safety.
