It is important to regularly check for possible leakage from Microwave Ovens in the workplace. Not only can excessive leakage be a problem for staff, it can be of particular danger to expectant mothers. This microwave leakage detector can be used to verify any leakage from Microwave Ovens within a few minutes.

Microwave leakage detectors are used as part of your Portable Appliance Testing routine.

Microwave Leakage Detector features:

- LCD digital readout
- Leakage volume in dangerous zones will sound "beeping" and a red flashing lamp
- Design suitable for use in either hand
- Battery operates for more than 1 year
- Never needs recalibration
- Highly sensitive
- Excellent reliability and high precision

Accessories:

Calibration :2450MHz

Measurement range:0-9.99mW/cm²

Warning:5.0mW/cm²

Accuracy: ± 1db

Power Supply:9v battery

Batter life:one year

How to measure the radiation of the microwave

Power it ,the measure distance is 2 inch before microwave .the LCD will display the data.press the "MAX",the maximum data will hold.
